

“ We have been very impressed with the quality of the service from Elite, from ideas and support with the design and layout to the quality of products, whilst appreciating that we need to keep within our budgets. ”

CIRENCESTER COLLEGE

HIGHER EDUCATION

After previously supporting **Cirencester College** with their Digital Skills Centre development, we were back in 2023 to support their most recent project, installing furniture in their T-Levels building, a ground-breaking facility designed to offer students a specialist learning environment for these new innovative qualifications.

This building offers specialist facilities for learners in the fields of construction, engineering, finance, health science, accountancy and early years education.

Both buildings were designed by local architects **Roberts Limbrick**, deliberately modelled on modern workplaces and seeking to bring the surrounding green campus 'into' the buildings. Construction was undertaken by another local firm, **EG Carter**.

Products from our portfolio were selected to create flexible learning environments and mixed-use spaces for public presentations and breakout arrangements. These solutions, similar to those selected for the Digital Skills Centre a year earlier, included Harmony benches, Bob stools, Salto agile seating, Mobile training tables and Ben breakout chairs.
