Form Chair Collection.

Italian designed, Form's smooth contour represents the balance of classic profiles with modern environments.

Available in six warming colour finishes, the responsibly sourced polypropylene shell can be supported by dark grey or white polypropylene legs or, for a more organic appearance, a wooden four-legged frame is available, subtly introducing a natural texture to the surrounding space.

Recyclable Content.

The Form chair collection is 100% recyclable due to the diligence applied during the material selection process.

Seat Shell	Plastic (Nylon)	100% Recyclable.
Seat Pad Structure	Plastic (ABS)	100% Recyclable.
Seat Foam	Foam	100% Recyclable.
Seat Fabric	Fabric	100% Recyclable.
Leg Frames	Steamed Beech	100% Recyclable.
Glides	Plastic (Nylon)	100% Recyclable.
Fixings and Fittings	Steel	100% Recyclable.

Our Plastic Awareness Policy.

We adhere to our Circular Economy business model that aims to deliver 100% recyclability.

The use of recycled plastic in place of virgin resin typically results in reduced energy consumption, lower cost, and reduced environmental impact.

Our Form seating products permits all plastic components to be recycled through curbside programs. The following illustrates what type of plastic is used and its recyclable properties.

WHAT WE USE	RESIN TYPE	RESIN ID CODE
Form Construction:		
Seat Shell.	Polypropylene + 30 GF (Glass Filled).	(PP) 5
Chair Leg Frame.	Polypropylene + 30 GF (Glass Filled).	(PP) 5
Seat Pad Structure.	Acrylonitrile Butadiene Styrene.	(ABS) 9
Feet.	Polycaprolactam - Polyamide 6 (Nylon Type 6).	(PA6)
Seat Foam.	Polyurethane.	(PUR) 113
Packaging Materials:		
Bags.	Low Density Polythene.	(LDPE) 4

Low Density Polythene (LDPE)

LDPE is not often recycled through curbside programs, but some communities will accept it.

Polypropylene (PP)

Can be recycled through some curbside programs.

Acrylonitrile-Butadiene-Styrene (ABS)

ABS is recycled by first shredding used plastics to produce shredded plastics. After this step, metals and undesirable plastics are separated from the shredded plastics to produce separated plastics.

Polyurethane (PUR)

Polyurethane is recycled in two primary ways: mechanical recycling, in which the material is reused in its polymer form, and chemical recycling that takes the material back to its various chemical constituents.

Polyamide (PA)

Polyamide is 100% mechanically and feedstock recyclable. Recycled content is made into new product formulations. This is a mixed plastic made up of many polymers.

Sourced Timber

Our Form solid timber frames are carefully sourced from managed forests through the FSC accreditation, and no timber is sourced or used by Elite anywhere outside of this framework.

Due to the natural nature of timber, all grains and tones are individual; therefore, no two timber frames will be alike.

We adhere to keep these tones very close by the regulated use of wood stains used.
