Pathogen/COVID Testing Pod

Features:

- Freestanding individual pod.
- Protective acrylic screen with lower cutout for operative staff protection.
- Acrylic screen cutout allows testing kits to be passed through.
- Worksurface ledges for operative staff use and participant.
- Mirror included for a participant to observe their RNA swab procedure.

Finishes

Standard Dual Board MFC Finishes.

Dimensions and Schematics

Singular Testing Pod
Code: PTPS

Our Pathogen/COVID testing pod is designed to achieve a comfortable area while performing RNA tests.

We have designed our pod to be both sturdy, practical and aesthetically pleasing while providing solutions for staff, students, or general public screening.

Note: Swab procedure posters and sanitary equipment illustrated in the document not supplied.

Environmental

We are proud to be FSC® certified.

Forest Stewardship Council (FSC)

FSC® is a global, not-for-profit organization dedicated to the promotion of responsible forest management worldwide.

FSC® defines standards based on agreed principles for responsible forest stewardship that are supported by environmental, social, and economic stakeholders.

FSC® helps take care of forests for future generations.

FSC® helps take care of forests and the people and wildlife that call them home.

By choosing these products, you help take care of the world’s forests. Learn more: www.fsc.org.

Our Plastic Awareness Policy

We adhere to our Circular Economy business model that aims to deliver 100% recyclability.

The use of recycled plastic in place of virgin resin typically results in reduced energy consumption, lower cost, and reduced environmental impact.

Our Pathogen/COVID Testing Pod product permits all plastic components to be recycled through curbside programs. The following illustrates what type of plastic is used and its recyclable properties.

WHAT WE USE	RESIN TYPE	RESIN ID CODE
Pathogen/COVID Testing Pod Construction:		
MFC Panel Edging.	Acrylonitrile Butadiene Styrene.	(ABS) 9
Cover Caps.	Low Density Polyethylene.	(LDPE) 4
Acrylic Screen	Perspex® Polymethyl Methacrylate.	(PMMA)7
Packaging Materials:		
Packaging Cling Film.	Low Density Polythene.	(LDPE) 4

Low Density Polyethylene (LDPE)
LDPE is not often recycled through curbside programs, but some communities will accept it.

Acrylonitrile–Butadiene–Styrene (ABS)
ABS is recycled by first shredding used plastics to produce shredded plastics. After this step, metals and undesirable plastics are separated from the shredded plastics to produce separated plastics.

Polymethyl Methacrylate (PMMA)
PMMA, the key type of acrylic, can be recycled in several ways. This normally involves subjecting the resin to pyrolysis. It is possible to recover the monomer from PMMA scrap by depolymerization. PMMA has been successfully depolymerized by contacting with molten lead resulting in MMA with a purity more than 98%.
